DETAILED ACTION

1. Claims 1-7 are pending.

Claim Objections

2. Claim 1 is objected to because of the following informalities: Line 16 reads, "a controller *for* control the multiplexer." For the remainder of this office action Examiner has interpreted the limitation to read "a controller to control the multiplexer." Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1 and 4 (and thus their dependent claims) appear to be in the form of a Jepson claim (improvement claim) and thus imply that the subject matter of the preamble is the prior art of another. However, by using the language "the encryption device comprising," the purpose of the subject matter of the preamble becomes unclear. Examiner suggests a correction to "wherein the improvement comprises" as suggested by 37 CFR 1.75(e).

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of copending Application No. 09/874377. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the present application are directed to a specific case of the claims of Application No. 09/874377. The claims of the instant application are directed towards an encryption apparatus with a multiplexer receiving two 48-bit inputs, a controller to control the multiplexer, a single S-Box permutation unit, and a de-multiplexer to distribute 32-bit data from the S-Boxes to one of two outputs. The copending application claims an encryption apparatus with a multiplexer receiving three 48-bit inputs, a controller to control the multiplexer, a single S-Box permutation unit, and a de-multiplexer to distribute 32-bit data from the S-Boxes to one of three outputs. At the time the invention was made, it would have been

Art Unit: 2134

obvious to a person of ordinary skill in the art to provide support for two inputs to a single S-Box permutation unit because it offers the advantage of increasing circuit space efficiency by providing the functionality of the S-Box permutation unit to a greater number of inputs while not further increasing the space required by the S-Box unit.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
